

The CAPTURE Project will revolutionize how chronic disease prevention practitioners and program managers learn from what they do. We are building a web-based evaluation platform to help make evaluation easier, more accessible and more practical. CAPTURE will offer a range of solutions that cover all aspects of program planning, evaluation and dissemination.

CAPTURE WILL SUPPORT :

 **Evaluation planning**
 Auto generate a logic model and choose evaluation questions and indicators. Develop your data collection forms based on recommended tools or upload your own questions.

 **Program planning and implementation**
 Gather information collected during your needs assessment and assign tasks or set milestones to implement interventions with the added convenience of calendar and e-mail reminders.

 **Data collection and analysis**
 Use online data collection or print forms for offline administration. CAPTURE will automatically produce summary tables and graphs while allowing data exporting for offline analysis.

 **Reflecting on practice**
 Share tacit knowledge by responding to automatically generated prompts about the successes and challenges you experience in planning, implementing and evaluating your intervention.

 **Reporting**
 Produce MS Word documents from predefined and customizable templates. Download reports onto your desktop for further refinement and publish your results onto the CAPTURE platform.

 **Evaluation capacity building**
 Optimize your CAPTURE experience and enhance your evaluation skills through online tips, video demonstrations, webinar presentations and discussions, and on-site training sessions.

 **E-networking**
 Connect with others working on similar projects and discuss practice issues with those you trust.

 **External resource searching**
 Find information like demographic data, policies, grey literature and the work of peers by using the CAPTURE search engine.

 **Finding interventions**
 Search for relevant interventions and evaluation reports saved on the CAPTURE platform or obtain intervention summaries from other web-based sources through CAPTURE.
